# 1. General description

Groggery is a fully responsive HTML5 template. It is ideal for restaurants, bars, cafes, bakeries, and coffee shops. Built with Bootstrap v3, it looks perfect on all major browsers, tablets, and phones. Groggery is packed with everything you need to create a new website from scratch: beautiful menu with unlimited categories, sorting and filtering capabilities, image gallery, reservation and newsletter sections, and many more. Feel free to visit the preview link or contact us with a feature request.

## 2. Key features

- Built with Bootstrap v3
- Fully responsive layout
- CSS3 and source LESS files included
- Isotope plugin included
- Lightbox plugin included
- Flickity carousel
- 4 different home screen styles
- 10 inner HTML pages
- Ionicons included
- Clean and developer friendly code
- W3C validation
- Free updates
- Support by e-mail
- MailChimp integration via AJAX
- Functioning reservation form
- Google Maps

### 3. Pages

- Main Page
- About
- Image Menu
- Text Menu
- Gallery
- Events
- Blog
- Blog Post
- Reservation
- Contacts

Current release is 1.1.0. Buying this template now you become eligible to free download all of its future updates including new pages and neat options.

### Stay tuned

If you like our works, feel free to contact us with new feature requests or ideas for future templates: [gaming10@gmail.com](mailto:gaming10@gmail.com).

## 4. Instructions

### 4.1. Template structure

- /index\_default.html - the main HTML page you need to modify with your content.
- /assets - contains images, plugins and other third party assets used in the template.
  - /bootstrap - contains original Bootstrap files. It is not recommended to modify files in this folder, unless you want to update to a later version of Bootstrap v3 (when available).
  - /css - contains the main compiled CSS file used in the template.
  - /less - contains source LESS files.

- /js - contains custom JS scripts.
- /plugins - contains thirdparty plugins used in the template.
- /img - contains images used in the template.
- /video - contains video used in the template.
- /favicon - contains the 16x16 favicon.

Original Bootstrap LESS files along with customized elements styles, are all imported into the main /less/styles.less file that is then compiled into /css/styles.css. Feel free to modify the source LESS files located in the /less folder or work with the /css/styles.css file directly.

## 4.2. Color schemes

If you need a different color scheme, you need to modify source LESS files.

Please, follow the steps below:

- Open to `/app/assets/less/components/colors.less` in your favourite text editor.
- Change the values of the `@brand-primary` and `@brand-accent` variables to your preferred colors.
- Save the file and compile less to css.

## 4.3. Reservation form instructions

This template contains a fully functioning PHP reservation form.

Note: The reservation form will not work in your local environment without a server that supports PHP.

In order to set up the reservation form, please follow the steps below:

1. Open theconfig.php file and fill out the required information:

- Your email address (\$to\_email)

This is an email address new emails will be sent to.

- Email subject (\$mail\_subject)

This is a subject of new emails you will receive.

2. Save config.php file.

## 4.4. MailChimp instructions

1. Login to your Mailchimp account, and create a mailing list for people to sign up for.
2. After you make your list, you'll need to get some code from it. Click on your list, and select "Signup forms" at the top. Select the Embedded forms option.
3. From there, you should see a text box section labeled "Copy/paste onto your site". Within the textbox, scroll until you find the part of the code that says `<form action="..."` You will need to copy everything with those quotation marks. It should begin with `http://`, end with a bunch of numbers and letters.

## 4.5. Contact form

This template contains a fully functioning PHP contact form.

Note: The contact form will not work in your local environment without a server that supports PHP.

In order to set up the contact form, please follow the steps below:

1. Open the `/app/assets/plugins/contact/config.php` file and fill out the required information:

- Your email address (`$to_email`)

This is an email address new emails will be sent to.

- Email subject (`$mail_subject`)

This is a subject of new emails you will receive.

2. Save `config.php` file.

## 4.6. Photos

All photos in the preview are not included into the download file. Please follow the steps below in order to replace them with your custom images:

- **index.html**

Please find an `<img>` tag that you need and replace its `"src"` attribute content with an actual link to your image (e.g. ``).

- **styles.css**

Please find a selector that you need and replace its `"url"` value content with an actual link to your image (e.g. `background: url("../img/your_photo.jpg");`).

## 5. FAQ

### How do I change the logo?

Please open *index\_default.html* and find this line:

```
<a class="navbar-brand" href="index_default.html">Groggery</a>
```

Replace the brand name with your custom one or use an image of your choice (using an image for the logo will require additional styles).

## How do I remove a section I don't need?

If you want to remove a section that you don't want to have on your website (e.g. newsletter), please open *index\_default.html* and find the section you want to remove:

```
<section class="section_newsletter">...</section>
```

Remove the *section* tag with all of its content to remove the section entirely. Alternatively, you can use the *.hidden* class to hide the section on the screen keeping the code.

```
<section class="section_newsletter hidden">...</section>
```
